🎓 EDUCATION

Computer Science MS , Georgia Institute of Technology College of Computing, Master of Science in Computer Science	Aug 2024 – May 2026 Atlanta
Computer Science BS , University Of California Santa Cruz Baskin School Of Engineering at University Of California Santa Cruz	Sep 2020 – Jun 2024 Santa Cruz

💼 PROFESSIONAL EXPERIENCE

Software Support Engineer 1 , Inductive Automation - Implement SQL Queries, Java Programming, Python Scripting, Command Line Programming, Database Configurations, API Integration, and Gateway Network Configurations as solutions for end users. - Construct extensive baseline analysis on software issues and bugs to identify the problem, cause, workaround, and potential fix to enhance user satisfaction. - Conjunctive problem solving with software developers and quality assurance engineers to diagnose and resolve escalated issues for software reliability. - Utilize Docker, AWS, VMware to simulate complex architectures to replicate issues and write effective bug tickets. Troubleshoot Ignition end user's projects and apply solutions through debugging, scripting, or software component reconfiguration.	Jan 2025 – present Folsom, United States
Software Engineering Intern - Internal Applications , Rivian - Enhanced and optimized the company's audit framework, conducting in-depth assessments, and deploying technical solutions to streamline auditing procedures and ensure regulatory compliance. - Leveraged AWS services, including Lambda functions, CloudWatch for monitoring, and DynamoDB for data storage to architect and implement robust audit solutions. - Specialized in the SDLC, focusing on a project centered around Software as a Service for common audit services. - Demonstrated proficiency in diverse storage technologies, working extensively with both SQL and NoSQL databases to handle data requirements efficiently.	Jun 2023 – Sep 2023 Palo Alto, United States

📁 PROJECTS

Flappy Bird , Python, 2021 - Developed a Flappy Bird game using Pygame, implementing realistic bird movement with gravity, collision detection, and pipe generation with randomized heights. - Created smooth animations for bird flapping and pipe movement, integrated dynamic score displays, and designed user-friendly game over screens. - Added engaging sound effects for bird flaps, scoring, and collisions to enhance the gaming experience, utilizing Pygame's audio functionality.
Alien Invasion , Python, 2022 - Developed an Alien Invasion game using Pygame, implementing player ship controls, enemy alien movements, and collision detection between bullets, aliens, and the player ship. - Designed dynamic game screens with animated sprites for the player ship, aliens, and bullets, with real-time score tracking. - Integrated immersive sound effects for shooting, explosions, and background music, and balanced gameplay mechanics to ensure a challenging and engaging player experience.
Bird Watching App , June 2024 - Interactive Map Integration: Developed an index page using Vue.js and Leaflet with OpenStreetMap tiles, allowing users to view bird densities, select species, and draw regions for detailed statistics. - User Data Management: Built a checklist page for users to enter and manage bird sighting data, incorporating species search, data submission, and checklist editing functionalities. - Statistical Visualization: Created detailed location and user statistics pages using Chart.js, displaying species sightings, contributor information, and dynamic, interactive visualizations.

🧠 SKILLS
